# CAUVERY COLLEGE FOR WOMEN (AUTONOMOUS) 

(Nationally Re-accredited (III cycle) with 'A' (CGPA 3.41 out of 4)
Grade by NAAC

# PG AND RESEARCH DEPARTMENT OF 

MATHEMATICS

## AUTONOMOUS SYLLABUS

M. Sc MATHEMATICS

2019 - 2020 onwards

## CAUVERY COLLEGE FOR WOMEN (AUTONOMOUS) PG AND RESEARCH DEPARTMENT OF MATHEMATICS <br> M.Sc MATHEMATICS <br> PROGRAMME OUTCOMES

| PO1 | Apply the ideas of mathematics to solve the scientific issues and problems being <br> faced in society. |
| :--- | :--- |
| PO2 | Utilize the knowledge of pure and applied mathematics to solve complex <br> mathematical <br> Problems. |
| PO3 | Use mathematical models to relate mathematical sciences in real world problems. |
| PO4 | Communicate effectively in the field of expertise on their activities, and write <br> effective <br> reports and make effective presentations. |
| PO5 | Prepare themselves completely to the demands of the growing field of mathematics. |
| PO6 | Plan to crack lectureship and fellowship exams approved by UGC like CSIR-NET <br> and SET. |

## CAUVERY COLLEGE FOR WOMEN (AUTONOMOUS)

PG AND RESEARCH DEPARTMENT OF MATHEMATICS
M. Sc MATHEMATICS COURSE STRUCTURE
(For the candidates admitted in the year 2019-2020)

Note:

Project : 100 Marks

Dissertation : 80 Marks

Viva Voce : 20 Marks

Core Papers - 14
Core Practical - Nil

Elective Papers - 5

Project - 1

Note:

1. Theory Internal 25 marks External 75 marks
2. Practical Internal 40 marks External 60 marks
3. Separate passing minimum is prescribed for Internal and External
a) The passing minimum for CIA shall be $40 \%$ out of 25 marks (i.e. 10 marks).
b) The passing minimum for End Semester Examination shall be $40 \%$ out of 75 marks (i.e. 30 marks).
c) The passing minimum not less than $50 \%$ in the aggregate.

## CORE COURSE - I (CC)

## Title of the Course: ALGEBRA-I Course Code: 19PMA1CC1 <br> Syllabus:

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Unit I:

Binary Operations - Groups - Subgroups - Permutations I - Permutations II - Cyclic Groups.

## Unit II:

Isomorphism - Direct products - Finitely Generated Abelian Groups - Groups of Cosets - Normal Subgroups and Factor Groups - Homomorphisms.

## Unit III:

Series of Groups - Isomorphism Theorems - Proof of the Jordan - Holder Theorem - Group Action on a Set - Applications of G - Sets to Counting - Sylow Theorems Applications of the Sylow Theorem.
Unit IV:
Rings - Integral domains - Some Noncommutative examples - The Field of Quotients of an Integral Domain - Quotient Rings and Ideals.

## Unit V:

Homomorphism of Rings - Factorization of Polynomials over a Field - Unique Factorization Domains -Euclidean Domains - Gaussian Integers and Norms.

## Text Books:

John B. Fraleigh,A First Course in Abstract Algebra, Narosa Publishing House, Third edition, 1992.

## Chapters and Sections:

UNIT I Chapter 1,2,3,4,5,6.
UNIT II Chapter $7,8,9,11,12,13$.
UNIT III Chapter $14,15,16,17,18,19$.
UNIT IV Chapter 23,24,25,26,27,28.
UNIT V Chapter 29,30,31.32,33,34.

## Reference Books:

[1] David S. Dummit and Richard M.Foote,Abstract Algebra,Wiley and sons,Third Edition ,2004
[2]Joseph A.Gallian,Contemporary Abstract Algebra,Narosa Publishing House,Fourth Edition, 1999.
[3]I.N.Herstein,Topics in Algebra,John Wiley,2 ${ }^{\text {nd }}$ Edition, 1975.

## Course Outcomes

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Gain expertise in the basic concepts of group theory with <br> the help of numerous examples | K4 |
| $\mathbf{C O 2}$ | Examine in detail about Permutation Groups and Normal <br> Groups and discuss in counting tricks in algebra | K4 |
| $\mathbf{C O 3}$ | Illustrate Jordan holder theorem with examples | K2 |
| $\mathbf{C O 4}$ | To classify groups of finite order upto 120 using Sylow's <br> theorems | K3 |
| $\mathbf{C O 5}$ | To evaluate the Field of Quotients of an integral domain | K5 |
| $\mathbf{C O 6}$ | Determine various forms of Polynomial rings,Further they <br> will be able to discuss Euclidean domain | K4 |

## Mapping with Programme Outcomes

S-Strong, M-Medium, L-Low

## CORE COURSE - II (CC)

Title of the Paper: ORDINARY DIFFERENTIAL EQUATIONS Course Code: 19PMA1CC2

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | 5 |

## UNIT I

The General Solution of the Homogeneous Equation - The Use of a Known Solution to Find Another - The Method of Variation of Parameters - Power Series Solutions and Special Functions : A Review of Power Series - Series Solutions of First Order Equations - Second Order Linear Equations. Ordinary Points .

## UNIT II

Regular Singular Points - Gauss's Hypergeometric Equation - The Point at Infinity. Legendre Polynomials - Properties of Legendre Polynomials - Bessel Functions. The Gamma Function, Properties of Bessel Functions.

## UNIT III

Linear Systems - Homogeneous Linear Systems With Constant Coefficients - The Existence and Uniqueness of Solutions: The Method of Successive Approximations Picard's Theorem.

## UNIT IV

Qualitative Properties of Solutions: Oscillations and the Strum Separation Theorem - The Sturm Comparison Theorem - Eigen Values, Eigen Functions and the Vibrating String.

## UNIT V

Nonlinear Equations: Autonomous Systems. The Phase Plane and Its Phenomena - Types Of Critical Points. Stability - Critical Points and Stability for Linear Systems - Stability by Liapunov's Direct Method - Simple Critical Points of Nonlinear Systems.

## Text Book(s):

[1] George F. Simmons, Differential Equations with Applications and Historical Notes, Second Edition, McGraw-Hill International Editions, 1957.

## Chapters and Sections:

UNIT I Chapter 3: $\quad$ Sections 15, 16, 19
Chapter 5: $\quad$ Sections 26 to 28
UNIT II Chapter 5: $\quad$ Sections 29, 31, 32
Chapter 8: $\quad$ Sections 44 to 47
UNIT III Chapter 10: Sections 55, 56
Chapter 13: Sections 68, 69
UNIT IV Chapter 4: Sections 24, 25

## Chapter 7: $\quad$ Sections 40

UNIT V Chapter 11: Sections 58 to 62

## Course Outcomes:

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Compute the Solutions of First Order Homogeneous Equations by <br> using Different Methods. | K3 |
| $\mathbf{C O 2}$ | Solve the Linear System Of Homogeneous Equations And <br> Compute the Solutions Of Initial Value Problems using Picard's <br> Method Of Successive Approximations. | K3 |
| $\mathbf{C O 3}$ | Diagnose the Functions of Gauss Hyper Geometric, Bessel's and <br> Legendre Polynomials. | $\mathbf{K 4}$ |
| $\mathbf{C O 4}$ | Discriminate the Qualitative Properties of Solutions for Boundary <br> Value Problems by Using Sturm Theorems. | $\mathbf{K 4}$ |
| $\mathbf{C O 5}$ | Analyze the Stability Nature Of Linear and Non-Linear System | $\mathbf{K 4}$ |

## CORE COURSE - III (CC)

\section*{Title of the course: INTEGRAL EQUATIONS, CALCULUS OF VARIATIONS AND TRANSFORMS <br> Course Code: 19PMA1CC3 <br> | $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | 5 |}

Syllabus:

## UNIT I

Calculus of variations and applications: Maxima and Minima - The simplest case Illustrative examples - Natural boundary conditions and transition conditions - The Variational notation - The More general case - constraints and Lagrange multipliers variable end points - Sturm-Liouville problems.

## UNIT - II

Fourier transforms: Dirichlet's conditions - Fourier series - Fourier's Integral formula - Fourier transform or complex Fourier transform - Inversion theorem for complex Fourier transform - Fourier sine transform - Inversion formula for Fourier sine transform - Fourier cosine transform - Inversion formula for Fourier cosine transform - Linearity property of Fourier transform - Change of scale property - Shifting Property - Modulation Theorem Multiple Fourier transforms - Convolution - The convolution or Falting theorem for Fourier transforms - Parseval's identity for transforms - Relationship between Fourier and Laplace transforms - Fourier transform of the derivatives of a function - Problems related to integral equations - Finite Fourier transforms - Finite Fourier sine transforms - Inversion formula for sine transform - Finite Fourier cosine transform - Inversion formula for cosine transform Multiple finite Fourier transform - Operational properties of finite Fourier sine transforms Operational properties of finite Fourier cosine transforms - Combined properties of finite Fourier sine and cosine transforms - Convolution.

## UNIT III

Hankel Transforms: Definition - Inverse formula - Some important results for Bessel function - Linearity property - Hankel Transform of the derivatives of the function - Hankel Transform of differential operators - Parseval's Theorem

## UNIT IV

Definition, Regularity Conditions - Special Kind of Kernels - Eigen values and Eigen functions - Convolution Integral - The Inner or Scalar Product of Two Functions - Notation - Integral Equations with Separable Kernals : Reduction to a System of Algebraic Equations - Examples- Fredholm Alternative - Examples - An Approximate Method - Fredholm Integral Equation of the First Kind.
UNIT V
Method of Successive Approximations: Iterative Scheme - Examples - Volterra Integral Equation - Examples - Some Results about the Resolvent Kernel - Classical Fredholm Theory: The Method of Solution of Fredholm - Fredholm's First Theorem Examples - Fredholm's Second Theorem - Fredholm's Third Theorem.

## CORE COURSE - IV (CC)

## Title of the Course: ALGEBRAIC NUMBER THEORY <br> Course Code: 19PMA1CC4

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Syllabus:

## UNIT I

Introduction - Divisibility - Primes - The Binomial Theorem Congruences - Solutions of congruences - The Chinese Remainder theorem.

## UNIT II

Techniques of numerical calculations - Public key cryptography - Prime power Moduli - Prime Modulus - Primitive roots and Power Residues Congruences of degree two, Prime Modulus.

## UNIT III

Quadratic Residues - Quadratic Reciprocity - The Jacobi Symbol .

## UNIT IV

Binary Quadratic Forms - Equivalence and Reduction of Binary Quadratic Forms - Sums of three squares - Greatest integer Function - Arithmetic Functions - The Mobius Inversion Formula - Recurrence Functions.

## UNIT V

The equation $a x+b y=c-$ Simultaneous Linear Equations Pythagorean Triangles - Assorted examples.

## Text Books:

## CORE COURSE -V (CC) Title of the Course: DISCRETE MATHEMATICS Course Code: 19PMA1CC5

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Syllabus:

## Unit I - Grammars, Languages and Automaton

Grammars and Languages - Finite Automaton or Finite State Acceptors - Finite Automaton and Regular Languages, Regular Expressions.

## Unit II - Graph Theory: Basic Results

Basic Concepts - Subgraphs - Degrees of Vertices - Paths and Connectedness.
Connectivity: Vertex Cuts and Edge Cuts - Connectivity and Edge - Connectivity - Blocks Cyclical Edge Connectivity of a Graph.

## Unit III - Independent Sets and Matchings

Vertex Independent Sets and Vertex Coverings - Edge Independent Sets - Matchings and Factors - Matchings in Bipartite Graphs.

Graph Colorings: Vertex Coloring - Critical Graphs - Triangle - Free Graphs - Edge Colorings of Graphs.

## Unit IV - Planarity

Planar and Nonplanar Graphs - Euler Formula and its Consequences - $\mathrm{K}_{5}$ and $\mathrm{K}_{(3,3)}$ are Nonplanar Graphs - Dual of a Plane Graph - The Four-Color Theorem and the Heawood Five-Color Theorem - Kuratowski’s Theorem.

## Unit V - Cryptography

Some Simple Cryptosystems - Enciphering Matrices.
Public Key: The idea of Public Key Cryptography - RSA - Discrete log.

## Text Books:

## Course Outcomes:

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Classify grammars and languages with its types. | K3 |
| $\mathbf{C O 2}$ | Classify the various types of graphs. | K3 |
| $\mathbf{C O 3}$ | Compute the Graph Colourings and related theorems. | K3 |
| $\mathbf{C O 4}$ | Ascertain the meaning of Vertex Cuts, Edge Cuts, Connectivity <br> and related theorems. | K4 |
| $\mathbf{C O 5}$ | Access the details of Planar and Non-Planar graphs, Dual of a <br> Plane graph. | K5 |
| $\mathbf{C O 6}$ | Apply the concepts of cryptography using matrices <br> Cryptosystem | K3 |
| $\mathbf{C O 7}$ | Develop the of Public key cryptography by RSA <br> cryp | K6 |

## Objectives

- To understand the fundamentals in algebraic structures.
- To motivate the students how to compute using algebraic structures for research.
- To familiarize the fundamentals in Galois group.

## Syllabus:

## Unit I:

Prime Ideals and Maximal Ideals - Irreducible Polynomials

## Unit II:

Classical Formulas - Splitting Fields.

## Unit III:

The Galois Group - Roots of Unity - Solvability by Radicals

## Unit IV:

Independence of Characters - Galois Extensions.

## Unit V:

The Fundamental Theorem of Galois Theory - Applications - Galois's Great Theorem.

## Text Books:

Joseph Rotman, Galois Theory, $2^{\text {nd }}$ Edition, Springer Verlag, 2006.

## Chapters and Sections

UNIT I Pages 31-43.
UNIT II Pages 44-58.
UNIT III Pages 59-75.
UNIT IV Pages 76-82.
UNIT V Pages 83-95.

## Course Outcomes

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Analyse the important concepts of Prime ideal and maximal <br> ideal and identify them in various examples. | K 4 |
| $\mathbf{C O 2}$ | Predict the notions principal ideal domain and unique <br> factorization domains and their connections with Euclidean <br> domain. | K 3 |
| $\mathbf{C O 3}$ | Examine the proof of solvability by Radicals. | K 4 |
| $\mathbf{C O 4}$ | Evaluate clear cut idea in the notions of Galois <br> groups,normal extensions and separable extensions and <br> illustrate them with various examples. | K 5 |
| $\mathbf{C O 5}$ | Learn Galois correspondence and give a proof of <br> fundamental theorem of algebra. Able to conclude the proof <br> of Fundamental theorem of Galois theory. | K 5 |

## CORE COURSE - VII (CC) <br> Title of the Course: REAL ANALYSIS - I Course Code: 19PMA2CC7 Objectives

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

- To study the basic concepts of real analysis.
- To comprehend the qualitative aspects of real analysis in the setting of metric spaces.
- To give an in-depth knowledge of the intrinsic geometric ideas through completeness, connectedness of metric spaces.

## Syllabus:

UNIT I
Sets and Functions - Mathematical Induction - Finite and Infinite Sets - The Algebraic and Order Properties of $\mathbb{R}$ - Absolute value and Real line - Completeness property of $\mathbb{R}$ - Applications of the Supremum Property - Intervals.

## UNIT II

Metric Spaces - Definition and Examples - Open Balls and Open Sets.

## UNIT III

Sequences and their Limits - Limit Theorems - Monotone Sequences - Subsequences and Bolzano - Weierstrass Theorem - The Cauchy Criterion - Properly Divergent Sequences - Introduction to Series - Convergent Sequences - Limit and Cluster Points - Cauchy Sequences and Completeness - Bounded Sets - Dense Sets.
UNIT IV
Continuous Functions - Combinations of Continuous Functions - Continuous Functions on Intervals - Uniform Continuity - Monotone and Inverse Functions - Compact Spaces and their Properties - Continuous Functions on Compact Spaces - Characterization of Compact Metric Spaces - Arzela- Ascoli Theorem.

## UNIT V

Connected Spaces - Complete Metric Spaces: Examples of Complete Metric Spaces Completion of a Metric Space - Baire Category Theorem - Banach's Contraction Principle.

## CORE COURSE - VIII(CC)

## Title of the Paper: LINEAR ALGEBRA

Course Code: 19PMA2CC8

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Objective

- To enable the students with thorough knowledge of the various aspects of Linear Algebra
- To make the students to solve the problems for competitive exams.
- To ensure the students to interpret the concepts of Linear Algebra with real life situations.

## Syllabus:

## UNIT I:

Linear Equations: Fields - Systems of linear Equations - Matrices and Elementary Row operations - Row-reduced echelon Matrices - Matrix Multiplication - Invertible Matrices Vector Spaces: Vector spaces -Subspaces - Bases and Dimension.

## Unit II:

Linear Transformations: Linear Transformations - The Algebra of Linear Transformations - Isomorphism - Representation of Transformations by Matrices - Linear Functionals.

## Unit III:

Polynomials: Algebras - The Algebra of Polynomials - Lagrange Interpolation Polynomial Ideals -The Prime Factorization of a Polynomial.

## Unit IV:

Determinants: Commutative Rings - Determinant Functions- Permutations and the Uniqueness of Determinants -Additional Properties of Determinants - Modules.

## Unit $V$ :

Elementary Canonical Forms: Introduction - Characteristic Values - Annihilating Polynomials - Invariant subspaces - Simultaneous Triangulation; Simultaneous Diagonalization- Direct-Sum Decompositions - Invariant Direct sums - The Primary Decomposition Theorem.

## Text book:

[1] Linear Algebra, Second Edition, Kenneth Hoffman and Ray Kunze, PHI Learning Private Limited, New Delhi, 2009.

UNIT I Chapter $1:$ Section 1.1-1.6
Chapter 2 : Section 2.1-2.3
UNIT II Chapter 3 : Section 3.1-3.5
UNIT III Chapter 4 : Section $4.1-4.5$
UNIT IV Chapter 5 : Section 5.1-5.5
UNIT V Chapter 6 : Section 6.1-6.8

## CORE COURSE - IX (CC)

## Title of the Course: TOPOLOGY

 Course Code: 19PMA2CC9Objectives

- To study the concepts concerned with properties that are preserved under continuous deformations of objects.
- To train the students to develop analytical thinking and the study of continuity and connectivity.
- To motivate for research in real life challenging problems.

## Syllabus:

## UNIT I

Topological Spaces:
Topological Spaces - Basis for a Topology - The Order Topology - The Product Topology on X x Y - The Subspace Topology - Closed Sets and Limit Points.

## UNIT II

## Continuous Functions :

Continuous Functions - The Product Topology - The Metric Topology.
UNIT III
Connectedness:
Connected Spaces- Connected Subspaces of the Real line - Components and Local Connectedness.

## UNIT IV

Compactness:
Compact Spaces - Compact Subspaces of the Real line - Limit Point Compactness - Local Compactness.

UNIT V
Countability and Separation Axioms:
The Countability Axioms - The Separation Axioms - Normal Spaces - The Urysohn Lemma The Urysohn Metrization Theorem - The Tietze Extension Theorem.

## Text Books:

[1] James R. Munkres, Topology(2 ${ }^{\text {nd }}$ Edition), Pearson Education Pvt.Ltd.,2002.
Chapters and Sections:
UNIT I Chapter 2 : Section 12-17
UNIT II Chapter 2 : Section 18-21(OMIT SEC 22)
$\begin{array}{llllll}\text { UNIT III } & \text { Chapter } & 3 & \text { 23-25 }\end{array}$

UNIT IV Chapter 3 : Section 26-29
UNIT V Chapter 4 : Section 30-35

## Reference Books:

## ELECTIVE COURSE - I (A) - (EC)

## Title of the Course: PARTIAL DIFFERENTIAL

 EQUATIONS| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{3}$ |

## Course Code: 19PMA2EC1A

## Objectives:

- To give an in-depth knowledge of solving partial differential equations.
- To allow them in deterministic mathematical formulations of phenomena in scientific and engineering problems.
- To study the other aspects of PDE.

## Syllabus:

## UNIT I

Partial Differential Equations Of The First Order: Partial Differential Equations Origins of First-order Partial Differential Equations - Cauchy's Problem for First-order Equations - Linear Equations of the First Order - Integral Surfaces Passing through a Given Curve - Surfaces Orthogonal to a Given System of Surfaces - Nonlinear Partial Differential Equations of the First Order.

## UNIT II

Cauchy's Method of Characteristics - Compatible Systems of First-order Equations -Charpit's Method - Special Types of First-order Equations - Solutions Satisfying Given Conditions - Jacobi's Method.

## UNIT III

Partial Differential Equations of the Second Order: The Origin of Second-order Equations - Second-order Equations in Physics - Higher-order Equations in Physics Linear Partial Differential Equations with Constant Coefficients - Equations with Variable Coefficients - Characteristic Curves of Second-order Equations .

## UNIT IV

Characteristics of Equations in Three Variables - The Solution of Linear Hyperbolic Equations - Separation of variables - The Method of Integral Transforms Nonlinear Equations of the Second Order.

## UNIT V

Laplace's Equation: Elementary Solutions of Laplace's Equation - Families of Equipotential Surfaces - Boundary Value Problems - Separation of Variables - Problems with Axial Symmetry.

## Text Book:

[1] Ian N. Sneddon, Elements of Partial Differential Equations, Dover Publication - INC. Mineola, Newyork, 1957.

## Chapters and Sections:

UNIT I Chapter 2: Sections 1 to 7
UNIT II Chapter 2: $\quad$ Sections 8 to 13
UNIT III Chapter 3: Sections 1 to 6
UNIT IV Chapter 3: $\quad$ Sections 7 to 11
UNIT V Chapter 4: $\quad$ Sections 2 to 6

## ELECTIVE COURSE - I (B) - (EC)

## Title of the Course: DIFFERENCE EQUATIONS Course Code: 19PMA2EC1B

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{3}$ |

## Objectives

- To examine linear difference equations of high order.
- To introduce the results of oscillation for linear difference equations.
- To extend them to nonlinear difference equations.

## SYLLABUS:

Unit I - Linear Difference Equations of Higher Order
Difference Calculus - General Theory of Linear Difference Equations - Linear Homogeneous Equations with Constant Coefficients
Nonhomogeneous Equations: Method of Undetermined coefficients - Limiting behavior of solutions.

## Unit II - System of Linear Difference Equations

Autonomous Systems - the Basic Theory
The Jordan form: Autonomous Systems Revisited - Linear Periodic systems.
Unit III - The Z-Transform Method and Volterra Difference Equations
Definition and Examples - The Inverse Z-transform and solutions of Difference Equations -
Power series method, partial fraction method, the inverse integral method
Volterra Difference Equations of convolution types: Volterra Systems.
Unit IV - Oscillation Theory
Three-Term Difference Equations - Self-Adjoint Second- Order Equations - Nonlinear Difference Equations.

## Unit V - Asymptotic Behavior of Difference Equations

Tools and Approximation - Poincare's theorem - Asymptotically Diagonal Systems - HighOrder Difference Equations - Second-Order Difference Equations.

## Text Books:

[1] Saber N elaydi, An Introduction to Difference Equations, Springer Verlag, New York, 2004.

## Chapters and Sections

UNIT I Chapter 2 : Section 2.1-2.5 [1]
UNIT II Chapter 3 : Section 3.1-3.4 [1]
UNIT III Chapter 6 : Section 6.1-6.3 \& 6.5 [1]
UNIT IV Chapter 7: Section 7.1-7.3 [1]
UNIT V Chapter 8: Section 8.1-8.5 [1]

## Course Outcomes:

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Examine linear difference equations of high order. | K4 |
| $\mathbf{C O 2}$ | Prepare to deal with systems of two or more dependent <br> variables. | K3 |
| $\mathbf{C O 3}$ | Reduce the study of a linear difference or differential equation <br> to examination of an associated complex function. | K4 |
| $\mathbf{C O 4}$ | Criticize the solutions oscillate around zero or eventually <br> positive or eventually negative. | K5 |
| $\mathbf{C O 5}$ | Compile the basic results of oscillation for three-term linear <br> difference equations. | K6 |
| $\mathbf{C O 6}$ | Extend at these results to nonlinear difference equations. | K6 |
| $\mathbf{C O 7}$ | Modify to oscillation theory for self-adjoint equations. | K6 |

| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Objectives

- To study the powerful tool of maxima-minima in calculus using mean value theorems.
- To study the concept of convergence of sequences and series of functions.
- To acquire the knowledge of the theory of multivariable calculus.

## Syllabus <br> UNIT I

Differentiation of single variable: Derivatives - The chain rule - local extrema -Rolle's theorem - Mean Value Theorem - Taylor's formula - Derivatives of vector - valued functions Functions of Bounded variation and rectifiable curves - Total variation -Functions of bounded variation - Equivalence of paths - Change of parameter.

## UNIT II

Riemann-Stieltjes integral: Definition - linear properties of the integral - Necessary conditions for the existence - First fundamental theorem of Integral calculus - Mean Value Theorems for integrals - Second fundamental theorem of Integral calculus- Change of variable in a Riemann integral - Second Mean value Theorem for Riemann.

## integrals

## UNIT III

Sequence and series of functions - Point wise convergence - Uniform convergence Uniform convergence and integration - Uniform convergence and Differentiation -Sufficient conditions for uniform convergence of a series.

## UNIT IV

Functions of Severable variables - Directional derivative -Total derivative - Jacobian Chain rule -Mean Value Theorem - Taylor's formula. UNIT V

Inverse function theorem - Implicit function theorem - Extremum problems with side conditions.

## Text Book

Tom M. Apostol, Mathematical Analysis, $2^{\text {nd }}$ edition, Narosa Publishing House, 2002.

## Chapters and Sections

UNIT I: Chapter 5 - Sections 5.1 - 5.5, 5.9-5.11
Chapter 6-Sections 6.3-6.12
UNIT II: Chapter 7 -Sections 7.1-7.22
UNIT III: Chapter 9 Sections 9.1 - 9.6, 9.8 - 9.11, 9.14, 9.15
UNIT IV: Chapter 12 - Sections 12.1-12.11, 12.14
UNIT V: Chapter 13 - Sections 13.1-13.7

# CORE COURSE - XI (CC) <br> Title of the Course: MEASURE AND INTEGRATION Course Code: 19PMA3CC11 

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Objectives

- To introduce the concepts of measure and integral with respect to measure.
- To show that their basic properties.
- To provide a basis for further study in Analysis.

## Syllabus: <br> UNIT I

Measure on Real line - Lebesgue outer measure - Measurable sets - Regularity - Measurable function - Borel and Lebesgue measurability.

## UNIT II

Integration of non-negative functions - The General integral - Integration of series - Riemann and Lebesgue integrals.

## UNIT III

Abstract Measure spaces - Measures and outer measures - Completion of a measure Measure spaces - Integration with respect to a measure.

## UNIT IV

Convergence in Measure- Almost uniform convergence- Signed Measures and Halin Decomposition -The Jordan Decomposition

## UNIT V

Measurability in a Product space - The product Measure and Fubini's Theorem.

## Text Book:

| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{5}$ |

## Course Code: 19PMA3CC12 <br> Objectives

- To study the concepts concerned with linear properties that are preserved under continuous deformations of objects.
- To train the students to develop analytical thinking and the study of continuity and connectivity
- To motivate the advance treatment of theory at a fairly understandable level.

## Syllabus:

## UNIT I

## Vector Spaces:

Vector Spaces - Subspaces - Linear dependence - Basis - Dimension - Algebra of linear transformations.

## UNIT II <br> Linear transformation and Its Properties :

Algebra of matrices - Rank and Determinant of matrices - Linear equations
UNIT III
Matrices and their Properties:
Eigenvalues - Eigenvectors - Cayley -Hamilton theorem - Matrix representation of linear transformations - Change of basis.

## UNIT IV

Diagonalizability and Canonical Forms:
Canonical forms - Diagonal forms - Triangular forms -Jordan forms.
UNIT V
Inner Product Spaces and Bilinear Form and Quadratic Form:
Inner product spaces - Ortho normal basis - Quadratic forms -Reduction and Classification of Quadratic forms.

## Course Outcomes

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Classify the vector spaces . | K3 |
| CO 2 | Apply the concept of linear transformations. | K3 |
| CO 3 | Prepare the consequences of Matrices. | K3 |
| CO 4 | Explain the Diagonalizability and Canonical Forms. | K4 |
| CO 5 | Choose the basis in innerproduct space. | K5 |

## ELECTIVE COURSE - II (A) - (EC) <br> Title of the Course: COMPUTATIONAL NUMERICAL ANALYSIS <br> Course Code: 19PMA3EC2A <br> Objectives

- To know the theory behind various numerical methods.
- To apply these methods to solve mathematical problems.
- To train the students to develop analytical thinking and the study of stability analysis.

## Syllabus:

Unit I
Transcendental and polynomial equations: Rate of convergence - Secant Method, Regula Falsi Method, Newton Raphson Method, Muller Method and Chebyshev Method. Polynomial equations: Descartes’ Rule of Signs - Iterative Methods: Birge-Vieta method, Bairstow's method. Direct Method: Graeffe's root squaring method.

## Unit II

System of Linear Algebraic equations and Eigen Value Problems: Error Analysis of Direct methods - Operational count of Gauss elimination, Vector norm, Matrix norm, Error Estimate. Iteration methods - Jacobi iteration method, Gauss Seidel Iteration method, Successive Over Relaxation method - Convergence analysis of iterative methods, Optimal Relaxation parameter for the SOR method. Finding Eigen values and Eigen vectors - Jacobi method for symmetric matrices and Power methods only.

## Unit III

Interpolation and Approximation: Hermite Interpolations, Piecewise and Spline Interpolation - piecewise linear interpolation, piecewise quadratic interpolation, piecewise cubic interpolation, spline interpolation-cubic Spline interpolation. Bivariate InterpolationLagrange Bivariate interpolation.

## Unit IV

Differentiation and Integration: Numerical Differentiation - Optimum choice of Step length - Extrapolation methods - Partial Differentiation. Numerical Integration: Methods based on undetermined coefficients - Gauss Legendre Integration method and Lobatto Integration Methods only.

## Unit V

Ordinary differential equations - Singlestep Methods- Local truncation error or Discretization Error, Order of a method, Taylor Series method, Runge-Kutta methods: Explicit Runge-Kutta methods- Minimization of Local Truncation Error, System of Equations, Implicit Runge-Kutta methods. Stability analysis of single step methods (RK methods only).

## Text Book:

M.K. Jain, S.R.K. Iyengar and R.K. Jain, Numerical Methods for Scientific and Engineering Computation, New Age International (P) Limited Publishers, New Delhi, Fourth Edition, 2003.

## Chapters and Sections:

UNIT I Chapter 2 : Section 2.5 \& 2.9
UNIT II Chapter 3 : Section 3.3-3.5, 3.7, 3.11
UNIT III Chapter 4 : Section $4.5-4.7$

UNIT IV Chapter 5 : Section 5.2-5.5, 5.8
UNIT V Chapter 6 : Section 6.4-6.5

## ELECTIVE COURSE - II (B) - (EC) <br> Title of the Course: FLUID DYNAMICS Course Code: 19PMA3EC2B

Objectives

- To understand the dynamics of real fluids.
- To familiarize with the properties of fluids and the applications of fluid dynamics.
- To understand the concept of fluid measurement, types of flows and dimensional analysis.

## SYLLABUS:

UNIT I
Real Fluids and Ideal Fluids - Velocity of a Fluid at a point - Streamlines and Path lines; Steady and Unsteady Flows - The Velocity potential - The Vorticity vector - Local and Particle Rates of Change - The Equation of continuity - Worked examples - Acceleration of a Fluid - Conditions at a rigid boundary - General analysis of fluid motion - Pressure at a point in a Fluid at Rest - Pressure at a point in a Moving Fluid - Conditions at a Boundary of Two Inviscid Immiscible Fluids Euler's equations of motion - Bernoulli's equation - Worked examples.

## UNIT II

Discussion of the case of steady motion under conservative body forces Some potential theorems - Some Flows Involving Axial Symmetry - Some special two- Dimensional Flows - Impulsive Motion - Sources, Sinks and Doublets - Images in a Rigid Infinite Plane - Images in solid spheres - Axi-Symmetric Flows; Stokes's stream function.

## UNIT III

Meaning of a Two-Dimensional Flow - Use of cylindrical Polar coordinates The stream function - The Complex Potential for Two-Dimensional, Irrotational, Incompressible Flow - Complex velocity potentials for Standard Two-Dimensional Flows - Some worked examples - Two-Dimensional Image systems - The MilneThomson circle theorem - The Theorem of Blasius.

## UNIT IV

The use of conformal Transformation - The Schwarz-Christoffel Transformation - Vortex rows - Stress components in a Real fluid - Relations between Cartesian components of stress - Translational Motion of Fluid Element The Rate of Strain Quadric and Principal Stresses - Some Further properties of the Rate of Strain Quadric - Stress Analysis in Fluid Motion - Relations Between stress and rate of strain - The coefficient of viscosity and Laminar Flow - The NavierStokes equations of Motion of a Viscous Fluid.

## UNIT V

Some solvable problems in Viscous Flow - Steady Viscous Flow in Tubes of Uniform cross section - Diffusion of Vorticity - Energy Dissipation due to Viscosity - Steady Flow past a Fixed Sphere Dimensional Analysis; Reynolds Number Prandtl's Boundary Layer.

## Text Books:

[1] F. Chorlton, Text Book of Fluid Dynamics, CBS Publishers \& Distributors, New Delhi, 2004.

UNIT I Chapter 2 : Section 2.1-2.11 Chapter 3 : Section 3.1-3.6
UNIT II Chapter 3 : Section 3.7-3.12 Chapter 4 : Section 4.2-4.5
UNIT III Chapter 5 : Section 5.1-5.9
UNIT IV Chapter 5 : Section 5.10-5.12
Chapter 8 : Section 8.1-8.9
UNIT V Chapter 8 : Section 8.10-8.16

## Course Outcomes:

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Apply Euler's and Bernoulli's equations and the conservation of <br> mass to determine velocities, pressures, and accelerations for <br> incompressible and inviscid fluids. | $\mathbf{K 3}$ |
| $\mathbf{C O 2}$ | Apply Laplace equation and its relation to elementary plane <br> flows of inviscid fluids: sinks, sources, vortex flows, and <br> superposition of these flows. | $\mathbf{K 3}$ |
| $\mathbf{C O 3}$ | Compute the Navier - Stokes equations of Motion of a Viscous <br> Fluid. | $\mathbf{K 3}$ |
| $\mathbf{C O 4}$ | Solve problems in Viscous Flow. | $\mathbf{K 3}$ |
| $\mathbf{C O 5}$ | Distinguish the concepts of rotational and irrotational flows of <br> stream functions \& velocity potentials. | $\mathbf{K 4}$ |
| $\mathbf{C O 6}$ | Analyze a variety of practical fluid-flow problems and utilize <br> fluid dynamics principles. | $\mathbf{K 4}$ |

## ELECTIVE COURSE - III (A) - (EC)

Title of the Course: PROBABILITY THEORY AND MACHINE LEARNING
Course Code: 19PMA3EC3A

## Objectives

| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| ---: | ---: | ---: | ---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{3}$ |

- To deal with random variables.
- To introduce expectations, convergence in random variables and distribution functions.
- To understand about Bayesian models

## Syllabus:

## Unit I - Probability Space

Definition of probability - some simple properties - discrete probability space - General probability space - Induced probability space.

## Unit II - Distribution functions

Distribution functions of a random variable -Decomposition of distributive functionsDistribution functions of vector random variables - Correspondence theorem.

## Unit III - Expectation and Moments

Definition of Expectation -Properties of expectation - Moments, Inequalities.

## Unit IV - Convergence of Random Variables

Convergence in Probability -Convergence almost surely - Convergence in distribution - Convergence in the $\mathrm{r}^{\text {th }}$ mean -Convergence theorems for Expectations .

## Unit V - Machine learning

Linear and logistic regression - K- nearest neighbor classifier - Naïve Bayes classifier - Support Vector Machine (SVMS) - bagging and boosting - random forest classifier - clustering algorithms.

## Text Book:

## ELECTIVE COURSE - III (B) - (EC)

## Title of the Course: STOCHASTIC PROCESSES

 Course Code: 19PMA3EC3B| $\mathbf{L}$ | $\mathbf{T}$ | $\mathbf{P}$ | $\mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{9 0}$ | $\mathbf{6}$ | - | $\mathbf{3}$ |

## Objectives

- To understand the stochastic models for many real life probabilistic situations.
- To learn the well known models like birth-death process and queuing to reorient the Knowledge of stochastic processes.
- Motivating the students to compare the real life problem with varies renewal and queuing models.

## Syllabus:

UNIT I
Stochastic Processes: Some Notions : Introduction- Specification of Stochastic processes Stationary processes
Markov Chains : Definitions and examples - Higher Transition Probabilities -
Generalization of Independent Bernoulli trails: Sequence of Chain -Dependent Trials.
UNIT II
Markov chains: Classification of States and Chains - Determination of Higher transition Probabilities - Stability of a Markov System - Markov Chain with Denumerable Number of States(or countable state space) - Reducible Chains - Markov
Chains with Continuous State Space.

## UNIT III

Markov Processes with Discrete State Space : Poisson Process and its Extensions Poisson Process -Poisson Process and Related Distributions - Generalisations of Poisson Process- Birth and Death Process - Markov Processes with Discrete State Space (Continuous Time Markov Chains).

## UNIT IV

Renewal processes and Theory : Renewal Process - Renewal Processes in Continuous Time - Renewal Equation - Stopping time : Wald's Equation - Renewal Theorems.

UNIT V
Stochastic Processes in Queuing and Reliability - Queuing Systems : General Concepts the Queuing model M/M/1 : Steady State Behaviour - Transient Behaviour of M/M/1 Model - Non-Markovian Queuing Models.

## Text Books:

[1] J. Medhi, Stochastic Processes, New age international(P) limited publishers, New DelhiSecond edition ,2006

Chapters and Sections:
UNIT I Chapter 2: Section $2.1-2.3$
Chapter 3: Section 3.1-3.3
UNIT II Chapter 3: Section 3.4-3.6, 3.8, 3.9 and 3.11
UNIT III Chapter 4: Section $4.1-4.5$
UNIT IV Chapter 6: Section 6.1-6.5
UNIT V Chapter 10: Section 10.1-10.3 and 10.7 (omit sec 10.2.3 and 10.2.3.1)

| Course Code 19PMA4CC13 |  | $\begin{gathered} \hline \text { Internal } \\ 25 \end{gathered}$ | $\begin{gathered} \text { External } \\ 75 \end{gathered}$ |

## Objectives

$>$ To study the three structure theorems of Functional Analysis viz., Hahn-Banach theorem, Open mapping theorem and Uniform boundedness principle.
$>$ To introduce Hilbert spaces and operator theory which leads to the spectral theory of operators on a Hilbert space.
> To enable the thorough knowledge of Banach* Algebra with the GelfandNeumark theorem.

## Course Outcome

On the Successful completion of the course the student would be able to

| CO No. | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Relate the concepts of groups, rings and linear transformation | K3 |
| $\mathbf{C O 2}$ | Apply general principle of Banach Algebra to define the <br> regular and singular elements of topological divisors and prove <br> spectral radius formula. | K3 |
| $\mathbf{C O 3}$ | Determine the concepts of Hilbert Space and discriminate <br> different types of operators. | K4 |
| $\mathbf{C O 4}$ | Analyze the structure of Commutative Banach Algebras to <br> prove the Gelfand Neumark theorem. | K4 |
| $\mathbf{C O 5}$ | Compose clear, accurate proof of Hahn Banach Theorem, <br> Open Mapping Theorem using continuous linear <br> transformation and Conjugate of an operator. | K6 |
| $\mathbf{C O 6}$ | Generalize finite dimensional spectral theory for different <br> types of operators. | K6 |

# CORE COURSE - XIII (CC) <br> FUNCTIONAL ANALYSIS <br> 2019-2020 Onwards 

## UNIT I

## ALGEBRAIC SYSTEMS

(18 Hours)
Groups - Rings - The structure of rings - Linear spaces - The dimension of a linear space - Linear transformations - Algebras.

## BANACH SPACES

The definition and some examples - Continuous linear transformations - The HahnBanach theorem - The natural imbedding of N in $\mathrm{N}^{* *}$ - The open mapping theorem - The conjugate of an operator.

## UNIT II

## HILBERT SPACES

(18 Hours)
The definition and some simple properties - Orthogonal complements - Orthonormal sets - The conjugate space $\mathrm{H}^{*}$ - The adjoint of an operator - Self-adjoint operators - Normal and unitary operators - Projections.

## UNIT III

## FINITE-DIMENSIONAL SPECTRAL THEORY

(18 Hours)
Matrices - Determinants and the spectrum of an operator - The spectral theorem - A survey of the situation.

## UNIT IV

## GENERAL PRELIMINARIES ON BANACH ALGEBRAS

(18 Hours)
The definition and some examples - Regular and singular elements - Topological divisors of zero - The spectrum - The formula for the spectral radius - The radical and semisimplicity.

## UNIT V

## THE STRUCTURE OF COMMUTATIVE BANACH ALGEBRAS

The Gelfand mapping - Applications of the formula $r(x)=\lim \left\|x^{n}\right\|^{1 / n}$ - Involutions in Banach Algebras - The Gelfand-Neumark theorem.

# CORE COURSE - XIV (CC) <br> COMPLEX ANALYSIS <br> 2019-2020 Onwards 

## UNIT I

(18 Hours)
Elementary Point Set Topology: Sets and Elements - Metric Spaces - Connectedness Compactness - Continuous Functions - Topological Spaces. Conformality: Arcs and Closed Curves - Analytic Functions in Regions - Conformal Mapping - Length and Area. Linear Transformations: The Linear Group - The Cross Ratio - Symmetry.

## UNIT II

(18Hours)
Fundamental Theorems: Line Integrals - Rectifiable Arcs - Line Integrals as Functions of Arcs - Cauchy's Theorem for a Rectangle - Cauchy's Theorem in a Disk. Cauchy's Integral Formula: The Index of a Point with Respect to a Closed Curve - The Integral Formula Higher Derivatives.

## UNIT III

( 18 Hours)
Local Properties of Analytic Functions: Removable Singularities. Taylor's Theorem Zeros and Poles - The Local Mapping - The Maximum Principle.

## UNIT IV

(18 Hours)
The General Form of Cauchy's Theorem: Chains and Cycles - Simple Connectivity Homology - The General Statement of Cauchy's Theorem - Proof of Cauchy's Theorem Locally Exact Differentials - Multiply Connected Regions. The Calculus of Residues: The Residue Theorem - The Argument Principle - Evaluation of Definite Integrals.

UNIT V
(18 Hours)
Harmonic Functions: Definition and Basic Properties - The Mean-value Property Poisson's Formula - Schwarz's Theorem - The Reflection Principle. Power Series Expansions: Weierstrass's Theorem - The Taylor Series - The Laurent Series.

OPTIMIZATION TECHNIQUES
2019-2020 Onwards

| Semester - IV | OPTIMIZATION TECHNIQUES | Hours/Week -6 |  |
| :---: | :---: | :---: | :---: |
| Elective Course - IV (A) |  | Credits - 3 |  |
| Course Code 19PMA4EC4A |  | $\begin{gathered} \hline \text { Internal } \\ \mathbf{2 5} \end{gathered}$ | External 75 |

## Objectives

$>$ To enlighten the students in the field of Resource Management Techniques.
$>$ To help the students to apply Resource Management Techniques in business and management problems.
$>$ To develop an understanding of problemsolving methods based upon model formulation.

## Course Outcome

On the Successful completion of the course the student would be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Solve Integer Programming by various types. | K3 |
| CO2 | Classify several Dynamic Programming problems. | K3 |
| $\mathbf{C O 3}$ | Compute Decision Theory problems and solve problems on <br> games. | K3 |
| $\mathbf{C O 4}$ | Predict Inventory models and solve them accordingly. | K3 |
| $\mathbf{C O 5}$ | Diagnose Non-linear Programming problems. | K4 |

## Mapping with Programme Outcomes

## ELECTIVE COURSE - IV (A) (EC) <br> OPTIMIZATION TECHNIQUES <br> 2019-2020 Onwards

UNIT I
INTEGER LINEAR PROGRAMMING:
(18 Hours)
Illustrative Applications of Integer Programming - Solutions methods of Integer Programming - Branch and Bound Algorithm - Cutting-Plane Algorithms - Zero-One Integer Program.

## UNIT II

DYNAMIC (MULTISTAGE) PROGRAMMING:
(18 Hours)
Elements of the DP model: The Capital Budgeting Example - More on the Definition of the State - Examples of DP models and Computations - Problem of Dimensionality in Dynamic Programming - Solution of Linear Programs by Dynamic Programming.

## UNIT III

DECISION THEORY AND GAMES:
(18 Hours)
Decisions under Risk - Decision Trees - Decisions under uncertainty - Game Theory.

## UNIT IV

INVENTORY MODELS:
(18 Hours)
The ABC Inventory system - A Generalized Inventory Models - Deterministic Models - Probabilistic Models.
UNIT V
NON-LINEAR PROGRAMMING ALGORITHMS:
(18 Hours)
Unconstrained Nonlinear Algorithms - Constrained Nonlinear Algorithms.
Text Book:

# ELECTIVE COURSE - IV (B) (EC) <br> FUZZY SETS AND THEIR APPLICATIONS <br> 2019-2020 Onwards 

| Semester - IV |  | Hours/Week - 6 |  |
| :---: | :---: | :---: | :---: |
| Elective Course - IV(B) | FUZZY SETS AND | Credits - 3 |  |
| Course Code - | THEIR APPLICATIONS | Internal | External |
|  | 19PMA4EC4B |  | $\mathbf{2 5}$ |

## Objectives

$>$ To introduce the concept of fuzzy theory and study its application in real problems.
$>$ To acquire knowledge of the uncertainty environment through the fuzzy sets that incorporates imprecision and subjectivity.
$>$ To provide a good outline of a model formulation and solution process.

## Course Outcome

On the Successful completion of the course the student would be able to

| CO No. | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Explain the basic concepts of Fuzzy set theory. | K2 |
| $\mathbf{C O 2}$ | Classify the operations on Fuzzy sets and Fuzzy measures and <br> give examples. | K3 |
| $\mathbf{C O 3}$ | Relate type-2 Fuzzy sets with Fuzzy numbers. | K3 |
| $\mathbf{C O 4}$ | Compose clear and accurate proofs using the concepts of <br> Fuzzy relations and Fuzzy graphs. | K6 |
| $\mathbf{C O 5}$ | Develop Fuzzy concepts to compute Fuzzy decision, Fuzzy <br> Linear Programming Program, Dynamic Programming. | K6 |

# ELECTIVE COURSE - IV (B) (EC) <br> FUZZY SETS AND THEIR APPLICATIONS <br> 2019-2020 Onwards 

## UNIT I

## INTRODUCTION TO FUZZY SETS:

Crispness, Vagueness, Fuzziness, Uncertainty - Fuzzy Set Theory.

## FUZZY SETS:

Basic Definitions - Basic Set-Theoretic Operations for Fuzzy Sets.

## UNIT II

## EXTENSIONS:

(18 Hours)
Types of Fuzzy Sets - Further Operations on Fuzzy Sets - Algebraic Operations - SetTheoretic Operations.

## FUZZY MEASURES AND MEASURES OF FUZZINESS:

Fuzzy Measures - Measures of Fuzziness.

## UNIT III

## THE EXTENSION PRINCIPLE AND APPLICATIONS:

(18 Hours)
The Extension Principle - Operations for Type-2 Fuzzy Sets - Algebraic Operations with Fuzzy Numbers - Special Extended Operations - Extended Operations for LRRepresentation of Fuzzy Sets.

## UNIT IV

## FUZZY RELATIONS AND FUZZY GRAPHS:

(18 Hours)
Fuzzy Relations on Sets and Fuzzy Sets - Compositions of Fuzzy Relations Properties of the Min-Max Composition - Fuzzy Graphs - Special Fuzzy Relations.

## UNIT V

DECISION MAKING IN FUZZY ENVIRONMENTS:
(18 Hours)
Fuzzy Decisions - Fuzzy Linear Programming - Symmetric Fuzzy LP - Fuzzy LP with Crisp Objective Function - Fuzzy Dynamic Programming.

## Text Books:

## Pedagogy

Power point presentation, Group Discussion, Seminar, Quiz, Assignment.

| Semester - IV | $\begin{aligned} & \text { DIFFERENTIAL } \\ & \text { GEOMETRY } \end{aligned}$ | Hours/Week - 6 |  |
| :---: | :---: | :---: | :---: |
| ELECTIVE COURSE - V (A) |  |  |  |
| Course Code - 19PMA4EC5A |  | Internal 25 | External 75 |

## Objectives

$>$ To equip the students with mathematical methods formatted for their major concepts.
$>$ To introduce the students the notion of surfaces with their properties.
$>$ To study geodesics and differential geometry of surfaces.

## Course Outcome

On the Successful completion of the course the student would be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathbf{C O 1}$ | Define space curves and the concepts of fundamental existence <br> theorem | $\mathbf{K 2}$ |
| $\mathbf{C O 2}$ | Explain the notion of surfaces and their intrinsic properties. | K2 |
| $\mathbf{C O 3}$ | Ascertain various concepts on geodesics. | $\mathbf{K 4}$ |
| $\mathbf{C O 4}$ | Deduce non intrinsic properties of a surface. | $\mathbf{K 3}$ |
| $\mathbf{C O 5}$ | Classify Differential Geometry of several surfaces. | $\mathbf{K 3}$ |

## Mapping with Programme Outcomes

S - Strong, M - Medium, L - Low

# ELECTIVE COURSE - V (A) (EC) <br> DIFFERENTIAL GEOMETRY <br> 2019-2020 Onwards 

## UNIT I

## The Theory of Space Curves

(18 Hours)
Introductory remarks about space curves - Definitions - Arc length - Tangent, normal and binormal - Curvature and torsion of a curve given as the intersection of two surfaces - Contact between curves and surfaces - Tangent surface, involutes and evolutes Intrinsic equations, fundamental existence theorem for space curves - Helices.

## UNIT II

## The Metric: Local intrinsic properties of a surface

(18 Hours)
Definition of a surface - Curves on a surface - Surfaces of Revolution - Helicoids Metric - Direction coefficients - Families of curves - Isometric correspondence - Intrinsic properties.

## UNIT III

## Geodesics

(18 Hours)
Geodesics - Canonical geodesic equations - Normal property of geodesics Existence theorems - Geodesic parallels - Geodesic curvature - Gauss-Bonnet Theorem Gaussian curvature - Surfaces of constant curvature.

## UNIT IV

The Second Fundamental Form: Local Non-intrinsic properties of a surface ( 18 Hours)
The Second fundamental form - Principal curvatures - Lines of curvature Developables - Developables associated with space curves - Developables associated with curves on surfaces.

## UNIT V

## Differential Geometry of surfaces in the large

(18 Hours)
Minimal surfaces - Ruled surfaces - Compact surfaces whose points are umblics Hilbert's Lemma - Compact surfaces of constant Gaussian or mean curvature.

## ELECTIVE COURSE - V (B) (EC) <br> AUTOMATA THEORY <br> 2019-2020 Onwards

## UNIT I

## FINITE AUTOMATA AND REGULAR EXPRESSIONS:

(18 Hours)
Finite state systems - Basic definitions - Nondeterministic finite Automata - Finite Automata with $\varepsilon$-moves.

UNIT II
(18 Hours)
FINITE AUTOMATA AND REGULAR EXPRESSIONS: Regular expressions.
CONTEXT- FREE GRAMMARS: Motivation and introduction - Context-free grammars - Derivation trees - Chomsky normal form - Greibach normal form.

## UNIT III

## PUSHDOWN AUTOMATA:

(18 Hours)
Definitions - Pushdown Automata and Context-free languages.

## UNIT IV

FINITE AUTOMATA AND LEXICAL ANALYSIS:
(18Hours)
The Role of the lexical analyzer - A simple approach to the design of lexical analyzers Regular expressions - Finite automata.

## UNIT V

FINITE AUTOMATA AND LEXICAL ANALYSIS:
(18 Hours)
From regular expressions to finite automata - Minimizing the number of states of a DFA - A language for specifying lexical analyzers - Implementation of a lexical analyzer.
